SUBJECT: TRN v0.1.0 release memorandum

REF: CHANGELOG.md [0.1.0], github.com/f00-sh/trn

This memorandum covers TRN version 0.1.0 only. TRN ships as an Enhanced Tabular Recipe Notation converter: Streamlit local app plus Cloudflare Pages site trn.f00.sh.

1. Summary

v0.1.0 is the first public f00 product release of TRN. Operators and users convert recipes from URL or paste into dense eTRN process matrices (Markdown table, JSON, printable HTML). Rule-based conversion works without paid APIs. Optional LLM path defaults to xAI Grok.

2. Added

- app.py single-file Streamlit converter
- Rule-based eTRN matrix builder
- Optional LLM path (OpenAI-compatible; default api.x.ai/v1, grok-3)
- recipe-scrappers + JSON-LD extraction with paste fallback
- site/ f00-styled converter on Cloudflare Pages project f00-trn
- Pages Function POST </api/scrape>
- Docs pack: SOP, this memo, man, file_id.diz, CHANGELOG

3. Changed

Not applicable - first release.

4. Fixed

Not applicable - first release.

5. Security

No authentication surface. API keys are user-supplied in session only and are not stored by the product. Do not commit secrets.

6. Upgrade / install

6.1 Use <https://trn.f00.sh> for the hosted converter.

6.2 Local: `pip install streamlit recipe-scrappers openai requests beautifulsoup4 && streamlit run app.py`

6.3 Deploy operators: `npx wrangler pages deploy site --project-name=f00-trn --branch=main`

7. Verification

- Paste a multi-step recipe; convert without LLM; table has ingredient rows and stage columns
- Download eTRN JSON; structure includes meta, ingredients, stages, markdown_table
- Open printable view; Print preview shows bordered table
- Optional: URL scrape against a schema.org Recipe page
- Optional: LLM path with valid key returns denser labels
