TRN * Enhanced Tabular Recipe Notation * <https://trn.f00.sh>

STANDARD OPERATING PROCEDURE

Document: SOP-TRN-OPS-001

Date: 2026-07-29

Version: v0.1.0

Standard: NASA NAII 1450.3 memorandum layout

Reply to Attn of: OPS/TRN

TO: Maintainers and Release Operators

FROM: Project Engineering

SUBJECT: TRN operator standard operating procedure (run, convert, deploy, release)

REF: AGENTS.md, README.md, CHANGELOG.md

Bottom line: TRN converts recipes into Enhanced Tabular Recipe Notation (eTRN). Operators run the Streamlit app locally, use or deploy the Cloudflare Pages site, and ship SemVer releases with the full documentation pack.

1. Purpose

This memorandum is the living operator handbook for TRN. It states how to run the converter, extract recipes, deploy the product site, and ship a versioned release.

2. Scope

This SOP covers product operations for TRN. It does not replace the README, man page, or the live site at <https://trn.f00.sh>.

- product identity
- local Streamlit run
- URL and paste extraction
- rule-based and LLM conversion paths
- Cloudflare Pages deploy
- release ship flow and docs pack
- failure responses

3. Product identity

Item	Value
Product name	TRN
Notation	Enhanced Tabular Recipe Notation (eTRN)
Site	https://trn.f00.sh
Repository	github.com/f00-sh/trn
License	MIT
Local app	app.py (Streamlit)
Edge host	Cloudflare Pages project f00-trn
URL scrape	Pages Function POST /api/scrape
Default branch	main
Published version	v0.1.0

4. Product laws

4.1 Keep the converter simple: URL or paste in, eTRN table and JSON out.

4.2 Rule-based path must work without network keys. LLM path is optional.

4.3 Never commit API keys or secrets. Users paste keys in session only.

4.4 Cloudflare Pages is the delivery plane for the public site. GitHub is source and release history only.

4.5 Every SemVer release updates CHANGELOG, file_id.diz, README, man, SOP PDF, and this-version release memo PDF.

5. Day-to-day operator flow

Use this path for local conversion and quality checks.

5.1 Clone github.com/f00-sh/trn and enter the repository root.

5.2 Create a virtual environment and install requirements.txt.

5.3 Run: streamlit run app.py

5.4 Paste a recipe with Ingredients and Instructions headers. Click Convert.

5.5 Confirm Markdown table, eTRN JSON download, and printable view.

5.6 Optional: enable LLM path with an xAI or OpenAI-compatible key for denser stage labels.

Figure 1. Day-to-day convert quality gates

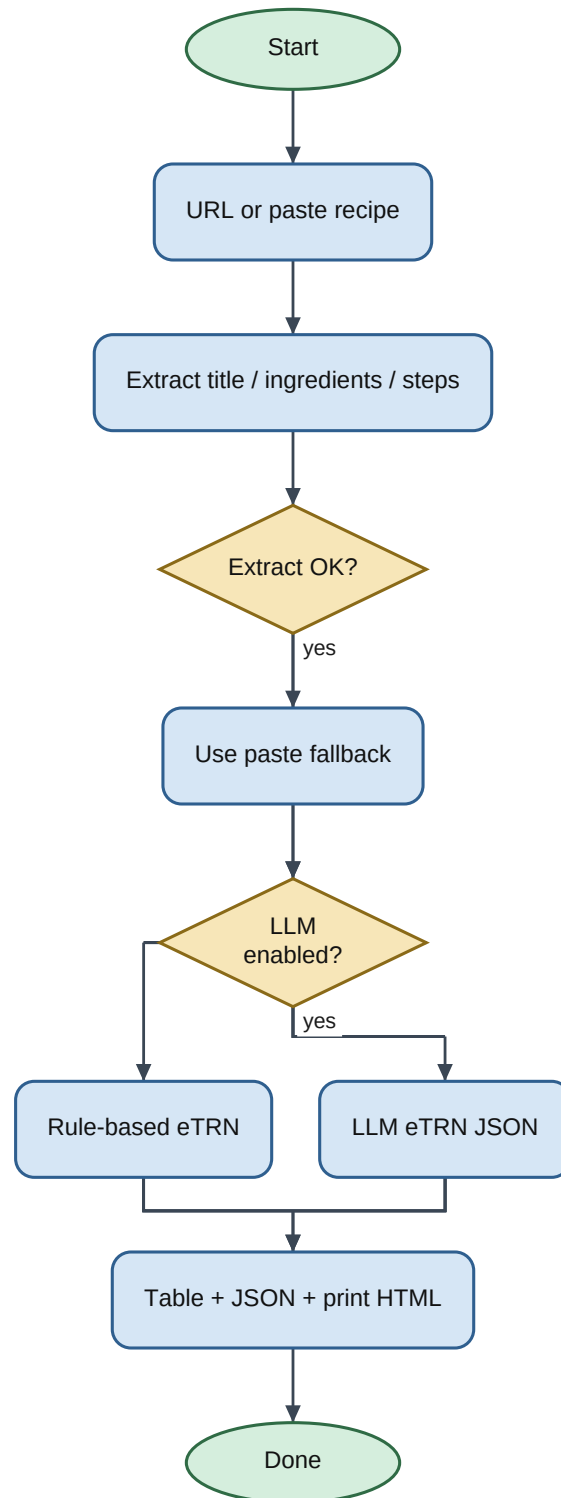

Figure 2. Sample eTRN process matrix

TRN sample - chocolate chip cookies (rule-based)

Ingredient	melt	cream	fold	bake 350°F 25min
1 cup butter	melt	cream		
1 cup sugar		cream		
2 eggs		beat in		
2 cups flour			fold	
1 tsp vanilla		add		
batter			form	bake 25 min

Ingredient rows x chronological stage columns. Empty cells mean idle. Dense phosphor table style matches the product site.

6. Extraction rules

Prefer structured sources. Fail soft with clear messages.

- Primary (local): recipe-scrappers scrape_me / scrape_html
- Fallback: schema.org/Recipe JSON-LD
- Edge site: POST /api/scrape then client parse
- If blocked (HTTP 401/403/429): instruct operator to paste text
- Paste parser: look for Ingredients and Instructions headers

7. Cloudflare deploy

7.1 Ensure site/ and functions/ are correct on main.

7.2 Deploy: npx wrangler pages deploy site --project-name=f00-trn --branch=main

7.3 Confirm custom domain trn.f00.sh resolves and shows the converter.

7.4 Smoke: paste a short recipe, convert, download JSON.

7.5 Smoke: URL scrape against a JSON-LD recipe page when network allows.

8. Release ship flow

Ship only after convert smoke and docs pack are complete.

8.1 Bump version surfaces: CHANGELOG, file_id.diz, README/site version strings, man page if needed.

8.2 Update docs/sop-trn-ops.json and re-render SOP PDF.

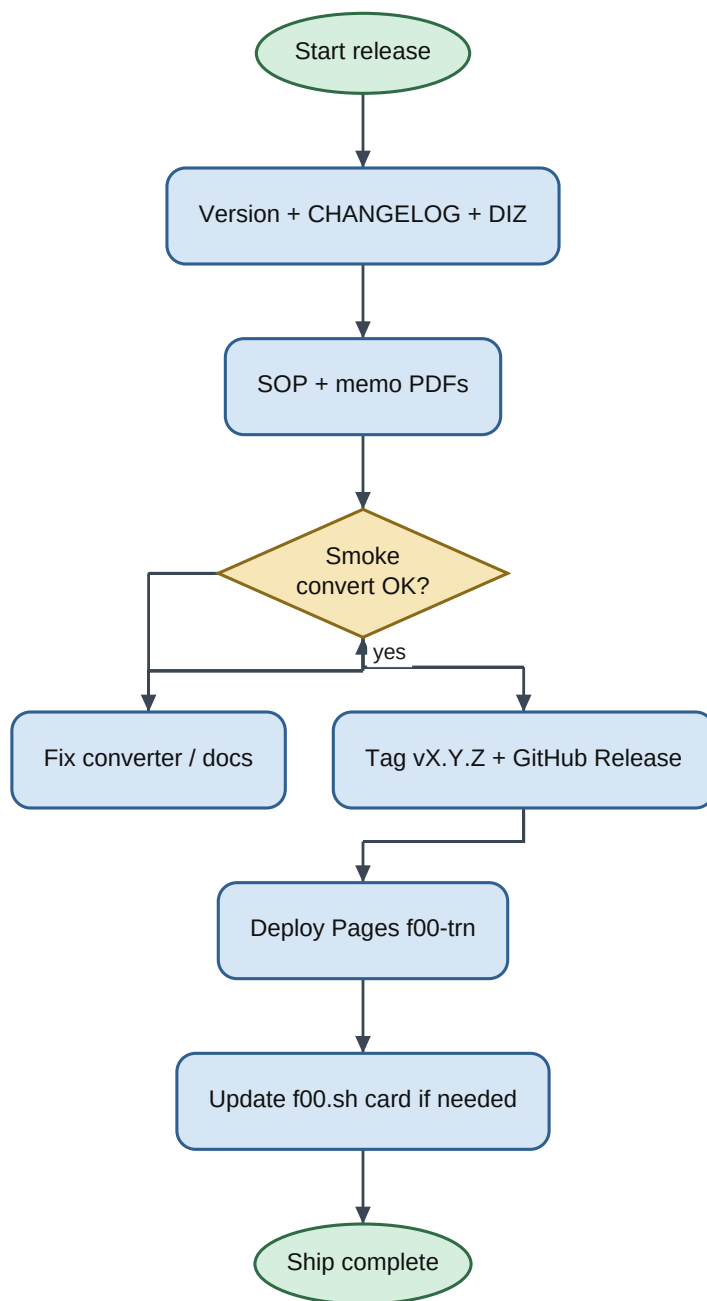

8.3 Write docs/releases/vX.Y.Z-memo.json for this version only; render memo PDF.

8.4 Commit, tag vX.Y.Z, push main and tags.

8.5 Create GitHub Release; attach SOP PDF, memo PDF, file_id.diz.

8.6 Deploy Pages if site changed; update f00 hub product card when copy or first ship requires it.

Figure 3. Release / ship flow

9. Failure responses

Symptom	Action
Site blocks scrape	Paste full recipe text; do not retry aggressively
Empty extract	Require Ingredients and Instructions headers in paste

LLM error	Fall back to rule-based path; check base_url and model
Pages deploy fail	Check CLOUDFLARE_API_TOKEN, project name f00-trn, wrangler login
DNS miss for trn.f00.sh	Confirm Pages custom domain + f00.sh zone CNAME
